

CAS BACnet Explorer Major Update (2.02aA)

Chipkin automation system is releasing a major new version of the CAS BACnet Explorer (2.02aA) that dramatically improves the performance of the MSTP network as well as resolving many other bugs. The new version can be downloaded [here](#).

The Maintenance Agreement allows updates for a fixed time (1 year by default, 2 or more years if you paid an additional fee). Some users will find that their maintenance period has expired when they try to use the new version. CAS has decided to extend all user's maintenance agreements at no charge, for this one time only.

Your green key has a date burned into it. To extend that date (and hence your maintenance period), first of all you need to download and execute a software tool that can be found at this [link](#). Then, insert your green key and run the tool. It's that simple.

You do not have to use the new version. If you continue using the version that is working on your laptop then there is nothing to do.

If you want to keep using the last version prior to this update then download from this [link](#).

For all technical questions, please contact Chipkin Automation Systems at 866-383-1657 x202 or email ssmethurst@chipkin.com.
